TOKEN SUPPLY STRATEGY

The total supply of \$PEPPE is set at 10 billion tokens to ensure long-term sustainability and market dynamics based on scarcity, setting it apart from other meme coins. This strategic decision aims to optimize the token's value and strengthen its market position.

Why a 10 Billion Supply?

- ✓ **Scarcity & Value Growth** → A lower supply increases the rarity of the token, driving higher demand and long-term price appreciation.
- ✓ **Controlled Circulation** → Limiting the supply helps reduce inflation and prevents excessive selling pressure, ensuring greater price stability.
- ✓ **Investor Confidence & Ecosystem Growth** → A well-structured supply model builds trust among holders while supporting the long-term vision of the Pepe Multiverse ecosystem.

This supply strategy ensures that \$PEPPE remains a valuable and sought-after asset, reinforcing its growth potential in the cryptocurrency market.
